

Claude Explained

FRONTMATTER

title: Claude Explained
video no: 4 of 30
series: Building an AI Business From Scratch
voice_reference: ../../Input/4. Resources/2.
scripting_resources/voice_reference/nate_herk_voice_reference.md
video_type: concept
hook_type: Curiosity-Gap
script_versions: A + B
status: DRAFT

REFERENCE VIDEOS

- CLAUDE CODE FULL COURSE 4 HOURS: Build & Sell (2026)
(<https://www.youtube.com/watch?v=QoQBzR1NIql>) -- Nick Saraev -- Watch the first 15 minutes: notice how Nick maps out the full Claude ecosystem before diving into Claude Code
- Claude Code Clearly Explained (and how to use it)
(<https://www.youtube.com/watch?v=zxMjOqM7DFs>) -- Independent creator -- Watch for how they handle explaining Claude the model vs Claude the product suite
- Claude Managed Agents Just Dropped, And It Kills n8n
(<https://www.youtube.com/watch?v=Ob5Vu-gD3mo>) -- Independent creator -- Watch for how new Claude products are framed against existing tools the audience already knows

THE ONE THING

Claude is not one product -- it is a family of tools with five different access points, and which one you use determines what you can actually build.

HOOK

You think you know Claude. You have used the chatbot. But you are probably missing the version of Claude that actually changes how you work.

TARGET VIEWER

Someone who uses Claude.ai daily but has never heard of Claude Desktop, Claude Code, or the API -- they think Claude is just the chat interface.

PAYOFF

After watching, the viewer can name every Claude product, explain what each one is for, and make a decision about which one fits their workflow right now -- not in the abstract.

BEAT STRUCTURE

Beat -- Most People Only See One Door

Point: Claude.ai (the chatbot) is just one entry point to the same underlying model -- there are four others most people have never opened.

Visual: Animation: a building with five doors, only one is lit up -- the others dark. Slowly light them up one by one.

Target words: ~100w

Beat -- Claude Chat -- The Starting Point

Point: The web app is the easiest entry point -- great for one-off tasks, analysis, and conversation. No setup, but limited for automation and ongoing projects.

Visual: Screen recording of claude.ai -- highlight what it does well, then show the limitation of copy-paste workflow

Target words: ~130w

Beat -- Claude Desktop -- Files and Local Work

Point: The desktop app connects Claude to your local files and integrates with your computer. Better for ongoing project work than the web app.

Visual: Demo: dragging a PDF or local folder into Claude Desktop, asking it to summarise or analyse

Target words: ~130w

Beat -- Claude Code -- For Builders

Point: Claude Code is a CLI tool that runs in your terminal, reads your project files, edits them directly, and runs commands -- no copy-paste, no IDE plugin.

Visual: Terminal: running claude in a real project folder, asking it to modify a file, watching the file change live

Target words: ~140w

Beat -- Claude Cowork -- Collaborative AI

Point: Cowork is Claude's product for working alongside you on real, multi-step tasks -- less like a chatbot, more like a colleague with access to the same context.

Visual: Screen recording of Cowork interface -- show a real work task being handled collaboratively

Target words: ~120w

Beat -- The API and Models

Point: The API gives direct access to the underlying model for building products. Three tiers: Opus (most capable), Sonnet (balanced), Haiku (fastest and cheapest).

Visual: Anthropic console screenshot, simple model comparison table: Opus / Sonnet / Haiku with use cases

Target words: ~120w

Beat -- CTA Bridge

Point: For most builders, Claude Code is the next step -- the next video explains what it actually is and why it is different from every other AI coding tool.

Visual: Preview clip from Claude Code Explained

Target words: ~60w

ANALOGY BANK

- Claude's product ecosystem: Like a building with multiple entrances -- same building, different access points optimised for different visitors. The chatbot is the front door, the API is the service entrance, Claude Code is the workshop in the back.
- Claude model tiers: Like hiring from the same staffing agency but different seniority levels -- Opus for complex high-stakes work, Sonnet for daily reliable work, Haiku for fast repetitive tasks where speed and cost matter.

THESIS LINE LOCATION

Beat 1 -- The insight is: Claude is not a chatbot, it is a model family with five access points, and the one you choose determines what you can build -- most people are using the least powerful version.

FRAMEWORK PHRASE

One model, five doors

SPECIFICITY BANK

- Claude model IDs: claude-opus-4-7, claude-sonnet-4-6, claude-haiku-4-5
- Claude.ai -- web interface at claude.ai
- Claude Desktop -- downloadable app for Mac and Windows
- Claude Code -- CLI tool, install with: `npm install -g @anthropic-ai/claude-code`
- Anthropic API -- accessed at api.anthropic.com
- Claude Cowork -- available through Anthropic (check current availability at claude.ai)

CONSTRAINTS

- Do not explain how to use any product in depth -- those are separate videos
- Do not go into pricing tiers in detail
- Keep model comparisons simple -- capabilities and use cases, not benchmark scores
- Do not explain what LLMs are -- that was the previous video

CTA DIRECTION

The next video is Claude Code Explained -- if you want to use AI to actually build things rather than just chat with it, this is the access point that changes everything.

PERSONAL ANGLE [DANIEL TO FILL]

Suggested: How long you used only Claude.ai before realising there were entirely different products you were missing -- and what finally pushed you to explore them.

VULNERABILITY MOMENT [DANIEL TO FILL]

Suggested: The time you dismissed Claude Code as "just another AI coding tool" before actually trying it -- and what changed your mind.

Note: belongs in Beat 4
